WeightIT©

Your Weighbridge in a Click

WeightIT is an innovative weighing software that optimizes the **management of vehicle weighing operations** carried out through a weighbridge.

The weighing software is accessible via **browser** from any pc, or device, through the sole use of the intranet.

Distinctive Features

- **Access to the software via browser**

The WeightIT software is accessible via browser from any device connected to the company network, avoiding the installation of the software on a single device that would limit the use of the software to a single operator.

- **No hardware installation**

WeightIT, does not require any installation on the user's hardware, as the software is pre-installed on the mini server provided. This feature of the software allows you to perform automatic updates of your software to the latest version available and also allows you to remotely resolve, without the intervention of on-site technicians, any problems of use. The application is therefore independent from hardware and operating systems, not affected by hardware updates and replacements.

- **Remote management of the weighing system**

The software allows the management of weighing operations directly from a personal computer or tablet in remote, allowing the visualization in real time of all weight data and information of the scale in any place through connection to the company intranet (ensuring data security).

- **Ease of use**

The graphic interface of the software is modern and intuitive allowing a high simplicity of use, and guiding the operator through all the available functions with extreme ease.

- **Connection to several weighing systems simultaneously**

WeightIT, connected to the company intranet, allows the connection of up to 8 scales, even located in different plants.

Main Functions

- **Weighing Modes**

Two different weighing modes are possible, the single weighing carried out through the manual introduction of the vehicle tare, or the input/output weighing with recall of the input weighing through the vehicle plate or the weighing identification code.

- **Integrated management of the master data:** Vehicles, Customers, Suppliers, Recipients, Materials, Carriers.
- **Management and printing of tags**

Each tag is associated with a unique Alibi memory ID code which approves the weigh and allows, at the end of the entry/exit operations, to summarize the data of the movements and print them on any printer.

- **History of the weighs carried out**

Thanks to the automatic storage system of each weigh, it is possible to view the history of the weighs and filter it by date and associated registry. This makes the acquisition, processing and evaluation of the data simple and fast. The remote consultation of the weighs can also be done through dedicated APIs.

- **Data Export in CVS and TXT**

Each weigh carried out can be exported, even automatically, to CVS or TXT files, allowing the visualization of the data with the most popular spreadsheet programs.

The Alibi memory ID code, associated with each card, also allows a complete dematerialization of documents (e.g. delivery note, invoice).

- **Display up to two scales**

The software allows to display on the screen up to two scales simultaneously located within the same intranet, with the possibility to change the scale display in a simple and fast way. This makes it possible to weigh incoming and outgoing vehicles on two different scales in a functional manner.

- **Access and management of users with different roles**

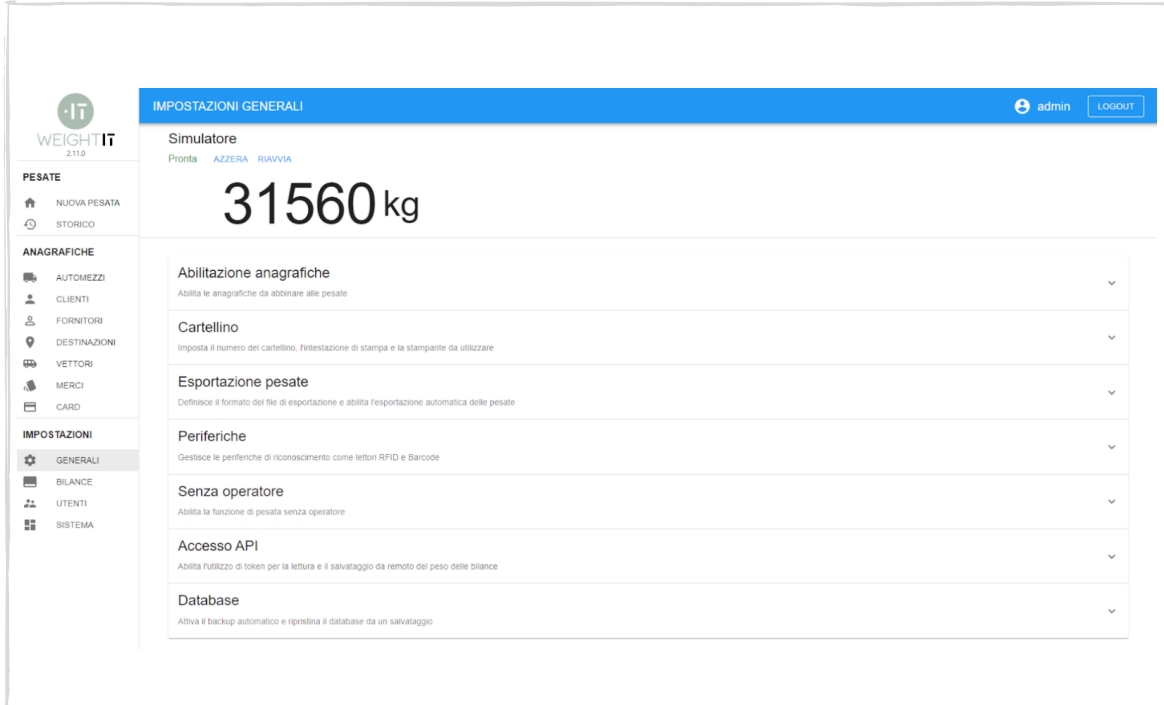

Limitations of the functions allowed to each user are configurable according to the role of the connected operator.

- **Monitoring of scale parameters**

The continuous monitoring of the scale and of the sensors, together with the tele-assistance, simplifies and speeds up the eventual adjustments and/or repairs both remotely and in presence.

Options and Softwares that can be Added

- WeightIT-Context: Software for **context photos** associated to weighings
 - WeightIT-Self: Software for **totems** without operator
 - WeightIT-Touch: Software for use on touchscreen **tablets**
 - WeightIT-PLC: Automation software with input output for peripheral management.
 - WeightIT-Export: Software for **customized data export** (API or SQL table sharing)
 - WeightIT-PMV: Software for **variable message panel** management (e.g. entry plate call, messages to drivers, etc.)
 - WeightIT-OCR: Software for license plate reading camera and vehicle identification
 - WeightIT-Temp: Software system for **temperature and mask detection** on totems (requires specific hardware)
 - WeightIT-GreenPass: System for reading the **European Green Pass** on totems
-
- Customizations or verticalizations on the specifications of the Customer
 - Possibility of receiving notifications via e-mail on possible malfunctions of the system.
 - Monitor for the visualization of the vehicles in arrival/exit
 - Printing of the DDT directly from the weighing totem without the driver having to go to the office.
 - RFID badge that can be associated to the vehicle and/or to other fields of the archives in use.
